### 95 150/112 ED

#### **OPERATING PRINCIPLE**

## FRT RETURN FILTER FOR FLANGE MOUNTING ON THE TANK SERIES 10

# p max 3 barQ max (see performance table)

- FRT filters are designed to be flange-mounted on the tank cover; the BSP threaded port for the input connection is positioned on the filter head and is therefore very accessible.
- The inspection cover fixed with three or four screws allows easy maintenance; the filter element is supplied with a screw, which makes its removal together with the container easier. In this way, by replacing the filter element, it is possible to clean the contamination present in the bowl of the filter.
- The filter element is made of high efficiency filtering materials and is able to hold high quantities of contamination material. It is available with three different filtration degrees:
  - $\begin{array}{l} \mbox{F10} = 10 \ \mbox{\mu}m \ \mbox{absolute} \ (\beta_{10} > 100) ISO \ 4406:1999 \ \mbox{class} \ 18/16/13 \\ \mbox{F25} = 25 \ \mbox{\mu}m \ \mbox{absolute} \ (\beta_{25} > 100) ISO \ 4406:1999 \ \mbox{class} \ 19/17/14 \\ \mbox{P10} = 10 \ \mbox{\mu}m \ \mbox{nominal} \ (\beta_{10} > 2) ISO \ 4406:1999 \ \mbox{class} \ 21/19/16 \end{array}$
- FRT filters are always supplied with a by-pass valve.
- All the FRT filters are designed to incorporate an electric or visual clogging indicator, to be ordered separately (see par. 5).

#### PERFORMANCES

Filter code	BSP port dimensions	Mass [kg]	Rated flow (indicative) [l/min]		
			F10	F25	P10
FRT-TB012	1/2"	0,45	18	25	30
FRT-TB034	3/4"	0,95	50	70	85
FRT-TB100	1"	1,1	65	110	130
FRT-TB114	1 ¼"	2,1	150	190	210
FRT-TB112	1 1⁄2"	3,1	160	250	290
FRT-TB200	2"	4,1	280	400	430

Maximum pressure	bar	3	
Collapsing differential pressure of the filter element	bar	3	
Differential pressure for the opening of the by-pass valve (±10 %)	bar	1,7	
Ambient temperature range	°C	-25 / +50	
Fluid temperature range	°C	-25 / +110	
Fluid viscosity range	cSt	10 ÷ 400	

**NOTE**: the flow rates stated in the table correspond to a 0.5 bar pressure drop measured with mineral oil of viscosity 36 cSt at 50°C. As for a different viscosity range, see **NOTE 2** par. 2.2.

#### HYDRAULIC SYMBOL

#### **1 - IDENTIFICATION CODE**

#### 2 - CHARACTERISTIC CURVES (values measured with viscosity of 36 cSt at 50°C)

#### 2.1 - Pressure drops through the filter body

#### 2.2 - Pressure drops through the FRTE filtering element

#### NOTE 2: the filter size has to be calculated so that with the nominal flow rate the pressure drop is lower than 0.5 bar.

The total pressure drop through the filter is given by adding the body pressure drop values to those of the filter element. As for fluids whose viscosity degree at a specific operating pressure is different from 36 cSt, the filter total pressure drop has to be changed according to the following ratio:

total  $\Delta p$  value = body  $\Delta p$  value + (real  $\Delta p$  value of the filter element x real viscosity value (cSt) / 36)

real  $\Delta p$  value of the filter element = value obtainable through the diagrams in par. 2.2

Such ratio is valid for a viscosity value up to 200 cSt. For a higher viscosity please consult our technical department.

#### 2.3 - Pressure drops through the by-pass valve

#### **3 - HYDRAULIC FLUIDS**

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

#### 4 - OVERALL AND MOUNTING DIMENSIONS

#### **5 - CLOGGING INDICATORS**

The filters are designed to incorporate clogging indicators, which have to be ordered separately.

This indicator is a pressure gauge sensitive to the filter input pressure.

The indicator is supplied with a 0 ÷ 6 bar graduated scale and with a two-colour reading scale, which

informs you about the clogging condition of the filter element:

GREEN: efficient filter element (0 ÷ 1.7 bar)

RED: the filter element has to be replaced (> 1.7 bar)

#### 5.2 - Electric indicator for return filters Identification code: ER/11

This indicator is a pressure switch sensitive to the filter input pressure, which switches an electrical contact when the filter element has reached the clogging limit.

The contact can be wired in an open or closed condition (see the hydraulic symbol).

#### **TECHNICAL SPECIFICATIONS**

Operating pressure	bar	1,5			
AC power supply					
Max. operating voltage	VAC	250 50/60 Hz			
Max. load on the contacts	А				
(inductive or resistive)					
with V at 125 VAC	~	3			
with V at 250 VAC		0,5			
DC power supply					
Max. operating voltage	VDC	30			
Max. load on the contacts					
resistive	A	3			
inductive		1			
Electric connector	DIN 43650				
Class of protection according to CEI EN 60529 (atmospheric agents)	IP65				
Atex classification	3 GD EEx e T6
